

“If CBD oil is **not** made from **fresh frozen** whole flower of **certified organic** hemp, and extracted with **hydrocarbon**, it’s an **inferior** product.”

Here’s why...

How hemp is grown and processed for CBD oil is more important than you may realize.

It is crucial you know these significant differences. Not only for the sake of your customers, but for the survival of your CBD business in this highly competitive market.

Things are about to get rough in 2020. The CBD and Hemp companies that supply the best and most effective products will be the ones to survive.

Consumers are becoming ever savvy about the quality of the CBD products they consume, and companies that can’t deliver a quality product will be left in the dust.

Quality matters to your bottom line.

Look at the website of any CBD company and you will read conflicting information about the growing, harvesting, and extraction methods used to produce CBD oil. What’s true and what’s just good marketing copy? It can be hard to know for sure.

What’s important is getting to the truth because your customers are trusting you to deliver the best product available to them and they are counting on your knowledge.

Imagine all the unhappy customers who believe they are buying the best CBD oil from you only to find out it wasn’t produced as well as others on the market?

You will never get those customers back, and worse, they may share negative reviews of your company and your product, costing you more business.

There is no doubt, the success of your business will be determined by your ability to identify the very best source of CBD products.

Why Certified Organic Hemp Matters

The quality of CBD oil starts with the quality of the plant, and that depends on the quality of the soil in which it is grown. Some farms remediate their soil, which lessens the quality and safety of their hemp plants.

When choosing a CBD oil to market, look for one where the hemp supply was grown on an organic farm that operates in agreement with the U.S Farm Bill and the law of its home state.

Organic is important to most CBD consumers. They want to avoid ingesting any potentially dangerous chemicals no matter what the product. Let them know the CBD oil you market is produced from organically grown hemp and you will have their attention ... and their loyalty.

The Hempsi Difference: Flash Frozen Hemp and Hydrocarbon Extraction

What better way to achieve the highest quality CBD oil than to lock in the very essence of the hemp plant by freezing it when it is picked at its peak of freshness. You will know you are buying the best full spectrum CBD oil when it is produced from freshly frozen hemp.

At Hempsi, the hemp flowers are frozen within 2 hours of harvest and the sudden flash freeze at the peak of their ripeness immediately halts any further maturation and maintains the robust terpene and cannabinoids in a whole way that also increases the entourage effect of the oil.

Cutting edge technology in the form of closed loop light hydrocarbon extraction is used. The final product is concentrated and fresh!

“The plants remain frozen until the Hempsi lab is ready to process them. We use the latest hydrocarbon extraction technology, a closed-

loop system with a proprietary technique which leaves zero residuals.

During extraction, the chambers reach an industry leading negative 110 degrees Fahrenheit, gently releasing the trichomes from the flower. There is no way to replicate the smell, taste and effect of our oil you either Freeze it at harvest or it is lost forever.

This method additionally eliminates the need for further filtration or winterization. Hempsi™ whole flower LIVE OIL™ is the highest quality and most potent cannabinoid and terpene concentrate on the market today” - Reid Stewart, Co-Founder of Hempsi

“Hempsi utilizes a low temp and low pressure proprietary hydrocarbon extraction process to create Hempsi extracts. Our state of the art, custom-built equipment managed by our highly trained lab technicians, provide our clients high-grade, safe extracts. Our methods are different from the majority of the industry giving us a unique, environmentally friendly way of separating cannabinoids from the hemp plant matter.”

The Entourage Effect of Cannabis

Many of the CBD products marketed today are isolate. They are cheaper to make and cheaper to buy but the consumer ends up taking more and seeking out a higher dosage as well just to get the desired effect. What they need is the entourage effect.

As a matter of fact, many customers who try Hempsi™ High CBD, Whole Flower LIVE OIL™ for the first time realize they have been using a lesser quality product and are suddenly getting the desired effects.

The cold extraction method Hempsi uses preserves more terpenes, which aid is the efficiency of their high CBD, whole flower LIVE OIL™ and helps to deliver the entourage effect.

Hempsi's™ LIVE OIL™ contains multiple cannabinoids and a terpene profile that includes 200 to 400 bioavailable compounds. That means the consumer feels a big difference from a smaller dose.

Terpenes are the molecules that give Cannabis and other plants their unique aroma, taste and feel. They are the essential oils of the hemp plant and the key to achieving what is known as the entourage effect of cannabis.

Terpenes can only be fully maintained through freezing at harvest in order to preserve the highest number of terpenes, which are in the water of the plant. Other companies that heat their hemp destroy many of the beneficial components due to the dehydration of the plant.

Third-Party Testing

Any cannabis company that voluntarily submits to third-party testing of their products automatically elevates themselves in the industry. They are the companies you can trust and the companies that want to do their best for their customers, and yours!

Hempsi is such a company and has every batch of extract examined by Oregon-licensed, third-party laboratories for strict testing.

This stringent testing ensures:

- Highest quality
- Potency & accuracy
- No toxins
- No pesticides
- No heavy metals
- No microbial contaminants

Hempsi™ Whole Flower LIVE OIL™ is the highest-quality and most potent cannabinoid concentrate on the market today.

Hempsi™ LIVE OIL™ is made from USDA Certified Organically grown hemp, extracted, manufactured, and tested in the U.S. The company is devoted to quality. Our farms operate in accordance with the U.S Farm Bill and the laws of the state of Oregon.

In addition to a commitment to quality in all

areas of production, Hempsi uses the best cold extraction process in the industry, which produces the highest quality hemp derived cannabinoids.

Pair that with outstanding customer service and you have a winning combination.

The company who supplies your products will make or break your business. Hempsi hemp products are made of quality ingredients that surpass all third-party testing. The freezing method and cold extraction method used keeps the vital components of the hemp flower intact and produces the very best products in the industry. You can be confident of your products when you partner with us.

Give your customers the best CBD oil possible. Know they are ordering top of the line from you. Be confident in your business and its success and the reputation you are building. We look forward to partnering with you.
